WORK EXPERIENCE

WebtronicLabs- Software development company

Miami, Florida.

Web Developer

Jun 2023 - Present

- Developed the company's website in less than a month, continuously maintained and developed product demo sites using WordPress, Elementor Pro, CSS, HTML, and JavaScript.
- Optimized website performance and boosted SEO by analyzing Google Console reports, resulting in a 40% increase in organic search traffic and a 20% improvement in page load speed.
- Collaborate with 3 teams of members to gather requirements and provide technical expertise.
- Leverage AI tools like ChatGTP to proactively enhance website performance and productivity.

Academlo - Web Development Educational Institute

Remote

Frontend Developer

Oct 2022 - Jun 2023

- Spearheaded the development of the AcademloPlus frontend website, facilitating seamless student enrollment and course access, improving usability and accessibility by 20%.
- Adapted swiftly to new technologies, showcasing proficiency in TypeScript.
- Collaborated on the front-end of an events voting application, ensuring a 100% fidelity to the Figma design provided.
- Engineered functional components, ensuring full responsiveness and dynamic content presentation.
- Identified and resolved website issues promptly, demonstrating a keen eye for detail and problem-solving skills.

EDUCATION

Computer Science and Fullstack Web Development

Remote

Academlo Top Student

Graduation Date: Dec 2022

PROJECT EXPERIENCE

Fullstack Website

<https://note-app-beryl-nine.vercel.app/>

Educational Courses Platform

- Achievements in my project include streamlined course browsing, secure purchases via Stripe, dynamic progress tracking, and a versatile teacher mode for easy course and chapter management. Noteworthy features encompass a user-friendly drag-and-drop interface, multimedia support with UploadThing, and advanced video processing through Mux. Integration of Clerk for authentication, Prisma for ORM, and Planetscale for MySQL database management enhances efficiency and security.

Fullstack website

Notes App

Start Date - Finish Date

- Key achievements in this project include a real-time database, a Notion-style editor with light and dark modes, infinite children documents, and a robust trash can with soft delete functionality. Other notable features comprise seamless authentication, file upload with real-time icon changes, and an expandable sidebar for enhanced user experience. The project ensures full mobile responsiveness, allowing users to publish notes to the web and recover deleted files. The addition of a landing page, and cover images for each document.
